

DIGITAL HOSPITAL

With the advent of the digital era, we are immensely delighted to say that Saveetha is the **only dental college in the country** to have an **iPad-based hospital information system!** With the introduction of this system, the complete details of the patient are readily available on a digital platform which includes the demographic data, findings of clinical examination, clinical photographs, radiographs, treatment plan, and the treatments provided. Each patient is assigned a unique identification number which can be accessed by all the doctors at the hospital at any given time. This in turn streamlines the system where any data can be procured instantly at the time of need without further delay. Having such a handy digital database confers a lot of advantages to the practice by serving a dual purpose in educating the patient as well as moderating the inter-disciplinary discussions. This digitization also contributes to a greener environment by evading the need for paper-based documentation. Besides, the software is also designed to send appointment details as messages directly to the patients paving way for a hassle-free practice.
