

500+ DENTAL OPERATORIES

The comprehensive clinic also known as the combo clinic is the brain child of Saveetha dental college. A student is taught and trained to treat a patient in a holistic and compendious manner. Our Clinics are equipped with over 550 electronic Kavo dental chairs that exceeds the requirement. All our clinics are air-conditioned to provide an efficient working condition. Every student has an uninterrupted working area yet closely monitored by the faculties across all the dental specialties in every clinic. The materials and equipments are within reach of the operator. A patient is provided with minimal waiting time, consultation by all the specialists which enhances the treatment provided. Each student is exposed to every dental speciality in the comprehensive clinics. Highly experienced clinical staff guide the student to make informed

decisions on diagnosis and treatment planning. Students learn to manage a patient in every aspect as it would be in a private practice. Patient history is taken on a paperless iPad Hospital Information System. Students are provided with their own dental chair and they manage their own instruments and materials through Material Audit and Self Assessment (MASA). This hones the students management skills and enlightens them on the dental chair mechanism and material sciences. They learn to be better clinical administrators. It is like they own a dental clinic in the campus.
